

CARLI FERTILPIU'

100% Vegetable-origin alfalfa fertilizer

100% ORGANIC ALFALFA GROWN AND PROCESSED IN ITALY

CARLI Fertili più is an organic vegetable fertilizer made from 100% pure dehydrated alfalfa. Particularly rich in triacontanol, it gives plants essential elements for their growth, such as mineral salts and vegetable origin amino acids. It also acts as a biological activator, releasing organic substances into the soil and facilitating the fixation of nutrients.

It is an unfermented fertilizer, free of wood and animal components, and therefore completely sustainable.

Thanks to its particularly slow release of nutrients, CARLI Fertili più is the ideal organic fertilizer for annual fertilization of vegetable gardens and for the preparation of seedbeds.

ORIGIN

Italy (Emilia Romagna)

COMPOSITION

100% organic GMO-free alfalfa grown and processed in Italy.

SHAPE AND PACKAGING

Crushed pellet

Available in:

- 10 kg bags on pallets of 40 bags
- 500/600 kg jumbo bags on pallets
- 1000/1500 kg jumbo bags with or without pallet
- bulk

Sustainable fertilizer

Thanks to the biological nitrogen fixation, alfalfa provides its own fertilizer and releases nutrients in the soil.

AVERAGE ANALYSIS

| | | |
|------------------------------------|---------|------|
| Moisture | 12 | % |
| PH | 6,2 | |
| Organic Carbon (C) on dry matter | 49 | % |
| Organic Nitrogen (N) on dry matter | 2,4 | % |
| Peat | assente | |
| Salinity | 4 | dS/m |
| Phosphorous (P) total | 0,5 | % |
| Potassium (K) total | 2,6 | % |

BENEFITS

- The formulation stimulates the metabolic activity of plants, promoting their optimal development.
- It improves the physical structure of the soil and helps maintain a constant temperature and humidity, protecting roots from freezing in winter and from excessive heat in summer.
- Thanks to its ability to absorb and retain moisture, Carli Fertilpiù allows for as much as 50% savings in watering needs.
- Carli Fertilpiù is of 100% vegetable origin, and, therefore, can be used for the cultivation of fruits and vegetables for vegan consumption.
- It is completely odourless.
- It has a low moisture content, guaranteeing easy use and a long shelf life.
- It is completely safe, having no chemical components, and is free of any risks relating to accidental contact or ingestion.

USE

Before application, remove any weeds and moisten the soil.

Use of the dry product:

Evenly distribute a cup of the product (approx. 250 g) at the base of large rose shrubs, halving the amount for potted or small plants.

For vegetable plants, evenly distribute a thickness of about 0.5 cm, and water to the maximum absorption capacity.

It is recommended to repeat every 10 days.

Use of the product dissolved in water:

Dissolve 250 g of product in 10 litres of water, and water the plants with the resulting solution once a week.

Keep the product in dry and ventilated place.

If stored properly Carli FERTILPIU has not expiry date.
