

## RYEGRASS PELLET

100% ITALIAN RYEGRASS, GROWN AND PROCESSED IN ITALY 

Grass forage from Italian fields, chopped and pelleted by mechanical means to preserve all the nutritional characteristics of the product. The hay pellets contribute to the ruminants' diets digestible fibres, sugars, vitamins and minerals. The pellet format makes the product easy to transport, guaranteeing it a long shelf life and usability in all seasons and farming conditions.

### ORIGIN

Italy (Emilia Romagna and Lazio regions)

### COMPOSITION

Grasses (*Phleum pratense*, *Lolium italicum*, *Poa pratensis*, *Dactylis glomerata*, *Bromus inermis*, *Festuca rubra*) and alfalfa (*Medicago sativa*)

### SHAPE AND PACKAGING

Pellet diameter 4, 6, 8, 10, 16, 18 mm

Available in:

- bulk
- 1000/1500 kg jumbo bags with or without pallet
- 500/600 kg jumbo bags on pallet
- 25 kg bags on pallet of 60 bags

### Sustainable forage

Gruppo Carli employs own renewable energy in processing its forage.

## BENEFITS

Hay forms the dietary basis of many farm animals, ruminants and monogastric animals, contributing digestible fibres, sugars, vitamins and minerals.

It also provides significant quantities of essential amino acids, enough for basic maintenance needs, and, in the case of dairy animals, for the synthesis of caseins.

Hay plays an irreplaceable dietary role also due to its long-fibre structure and composition, which promotes chewing and thereby contributes to the regulation of rumen pH, with clear beneficial effects for digestion.

The processing performed within Gruppo Carli facilities produces healthy, 100% usable forage, free of foreign bodies, moulds and internal fermentation.

## USE

Hay pellets are a forage with an excellent nutritional composition, rich in highly digestible fibres, sugars, proteins and other constituents essential for the body, such as minerals and vitamins.

Suitable for all ruminants (e.g. dairy cows, meat animals, sheep, goats, buffaloes) in need of digestible fibres and high quality proteins in their diets, during all stages of their lives.

Administer freely to make up daily rationing.
