

RYEGRASS HALF BALES

100% ITALIAN RYEGRASS, GROWN AND PROCESSED IN ITALY

Ryegrass is the natural Italian spring grass hay.

It is a highly palatable and extremely digestible forage, enabling animals consuming it to maintain high dry matter intake levels and outstanding performance.

The nutritional value of Italian Ryegrass is characterized by its content of carbohydrates (highly digestible fiber and sugar), proteins and micro-elements, such as minerals and vitamins.

Italian Ryegrass is completely natural and it is GMO-free.

ORIGIN

Italy (Emilia Romagna and Lazio regions)

COMPOSITION

Gramineae (*Phleum Pratense*, *Lolium italicum*, *Lolium perenne*, *Poa pratensis*, *Dactylis glomerata*, *Bromus inermis*, *Bromus catharticus*, *Festuca rubra*) and Leguminosae (*Medicago sativa*)

GMO FREE

SHAPE AND PACKAGING

Fibre length

- 3 - 5 cm
- 5 - 10 cm

400 – 420 kg bales tied with plastic stripes

Bale dimensions: cm 80 X 110 x H 120

Sustainable forage

Gruppo Carli employs own renewable energy in processing its forage.

GRADING

	HIGH FIBER	STANDARD	PREMIUM
PROTEIN o.d.m.	7% - 9%	9% - 11%	12%
MOISTURE	<12%	<12%	<12%
ADF	40 - 45%	38 - 43%	35 - 40%

BENEFITS

The fiber digestibility of ryegrass makes of this forage the nutritional base of the livestock feeding, both for ruminants and monogastric animals, providing also sugars, vitamins and minerals. Moreover, ryegrass play an irreplaceable dietary role due to its fiber physical structure: by promoting chewing, it contributes to the regulation of rumen pH, with beneficial effects on digestion. The fibre length (max 10 cm) shortens grinding time in the TMR preparation with consequent reduction of daily costs. Ryegrass' selection and processing in Gruppo Carli facilities allow to obtain a healthy forage, free from foreign bodies, without mold or internal fermentation, 100% usable.

USE

Ryegrass is employed in the nutrition of all types of livestock animals: dairy and beef cattle, sheep and goat, camels and buffaloes, horses, poultry, rabbits and fish. Ryegrass bales can be administered as a ready forage, combined with other components in the TMR or added as ingredient in the complete feeds.
