

CRUSHED STRAW

100% STRAW FROM ITALIAN CEREALS

Carli straw comes from cereals grown on Italian fields and processed by Group premises in Italy. Hard and soft wheat, spelt and barley are cultivated with no use of chemical fertilizers, pesticide treatments and irrigation.

Crushed straw by Gruppo Carli is completely natural and mechanically processed only: the cutting, the chopping, the compression into pellets and the crumbling involves no additives or other substances. It is successfully employed in all seasons and in different breeding conditions (dairy or meat cattle, sheep and goats, horses, poultry, pigs).

ORIGIN

Italy (Emilia Romagna and Lazio regions)

COMPOSITION

100% cereal straw (wheat, barley and spelt) GMO FREE

Sustainable straw

Gruppo Carli employs own renewable energy in processing straw.

SHAPE AND PACKAGING

Crushed pellet

Available in:

- bulk
- 1000/1500 kg jumbo bags with or without pallet
- 500/600 kg jumbo bags on pallet
- 20 kg bags on pallet of 60 bags

BENEFITS

Crushed straw by Gruppo Carli has an absorbency of up to 300% of its volume, providing animals comfort and excellent thermal insulation.

Thanks to the high temperature pelletizing process it is hygienic and it is not harmful if swallowed. It has a natural cereal fragrance, suppressing bad odors.

Crushed straw by Gruppo Carli has a positive environmental impact: it is a versatile bedding, successfully employed for all farming animals, besides being freely disposable and rapidly compostable.

SUGGESTED FOR

USE

Poultry farms (broilers, layers, turkeys, ostriches, geese and ducks).

For broiler chickens - broilers - for chicks evenly spread a layer of minimum 6 mm (about 3 kg / sqm).

Increase the quantity for adult poultry (cca 5 kg / sqm).

Remove completely the litter every 50-60 days, clean the surface and cover with clean straw.

Livestock farms

Distribute on the floor the desired quantity of crushed straw.

Remove the dirty parts daily and replace the litter with clean straw. Every 20-30 days remove completely the litter, clean the floor and distribute clean straw.

Mulching

Spread a layer of crushed straw (a 20 kg bag covers about 5 sqm) and wet until it expands 3 times its size to obtain a natural weed deterrent and soil conditioner.
