

TOTAL FEED DRY OVICAP

FEEDING SYSTEM FOR DRY GOATS AND SHEEP

A **complete feed** for small ruminants, specifically designed for the **dry phase**.

Fibres are predominantly selected from grasses to create an **effective rumen base**. The fibres come from areas with low potassium content, with the aim of controlling the Anion-Cation Balance (D-CAD), the reference principle for the correct management of calcium metabolism during the delicate peripartum phase.

Particular care is taken in the **processing of the fibre**: it is specially sized to suit the stage and characteristics of the animals.

This ensures **maximum ingestibility** and counteracts the animals' natural tendency to take up the ration by selecting the parts they like best.

PACKAGING

- in bulk;
- 400/500 kg bales tied with iron wire;
- bales of approximately 25 kg wrapped in recyclable plastic, pre-cut into 4 portions and packaged in blocks of 48 bales on pallets.

Bale dimensions:
cm 30 X 60 H 30

Pallet dimensions:
cm 120 X 90 H 245

TIPS FOR CORRECT USE

Fed *ad libitum*, it meets the animals' full requirements during this phase and is therefore suitable for use as a **complete feed**.

Voluntary daily consumption may be:

- **Sheep** 1.3 - 1.6 kg;
- **Goats** 1.8 - 2.2 kg.

Feed the portions of the bale, obtained after removal of the packaging, without altering the structure: this will limit the natural tendency of the animals to select the components, thus keeping the intake of the ration uniform over 24 hours.

The product can also be used to supplement on-farm resources.

During the last two weeks prior to calving, especially in the case of multiple births, it may be important to provide a **supplement** with a higher calcium and protein content.

In these phases it is advisable to work under the guidance of a qualified technician to whom Gruppo Carli will be happy to provide, if requested, the technical details useful for the best use of the product.

SELF-PRODUCED Complete feed

- + purchase of raw materials
- + working time

- + storages
- + machinery

- + structural costs
- + financial commitment

- + risks
- + specialised labour

**RATION
(UNIFEED)**

VS

TOTALFEED CARLI Ready to use Unifeed

- single feed
- + diversified phases

- + barn space
- + free time

- + management simplicity
- + hygiene in storage

- + well-being and productivity
- specialised labour
